BY STUDENT FEES

Yale Remodels Engineering Program

On November 6, 1961 Yale Iniversity revealed a plan for omplete revision of its enginering department. The plan will lose the ever widening gap beween engineering and science. is intended to make the modrn engineer a "middle--man etween science and society."

The new method, which is exected to be in operation within year, will eliminate the undergraduate School of Engineering. At the same time it will change raduate study in engineering to professional pattern much like hat in use in law and medicine

Since the proposals came at a ime of general reappraisal of he engineering education proed to have national impact. Current criticism of engineering curricula seems to lie in two main divisions; firstly, lack of scientific background on the professional engineering level and secondly, lack of general knowledge in the liberal arts. Under the plan, undergradu-

gram, the revised plan is expect-

ate engineering students will enroll in the Liberal Arts School of Yale University with engineering as their major. This will necessitate the formation of a new department in the School of Liberal Arts and Science, namely, the Department of Engineering and Applied Science. New courses to be offered are "applied mathematics" and "applied physics."

The major reason for the change is that at the completion of a four or five year engineering course the young engineer's knowledge is considered inadequate as a professional education. It is felt that a four or five year course should develop in the engineering student the basic fundamentals of his field which should act as "a solid foundation for future learning whether in future graduate work, formal on-the-job training, or in selfinstruction."

The new graduate program will follow two parallel paths. One will stress research in engineering science or in applied science; the other will stress problem solving, system analysis or design, leading to professional engineering practice. It will be possible to attain one of four graduate degrees; Master of Science, Master of Engineering, Doctor of Philosophy or Doctor of Engineering. It is recommended that the latter be taken after many years of professional experience.

The plan describes scientists as "interested in knowledge per se," whereas engineers as "middlemen between the sciences and society" who must use scientific information and techniques with a social objective. This requires more than a sprinkling of social science or humanity courses. With the addition of five credits of free electives to the CCNY chemical engineering curriculum it seems that CCNY is also considering some of the above changes.

(Editor's note: In part II of this series on "Remodeling the Engineering Curriculum," TECH NEWS will present CCNY's opinions and need for remodeling the Engineering Curricula. The Editor

Congratulations

Congratulations are in order to Miss Caryl Singer, Managing Editor of Tech News, on her engagement to Sanford Israel.

TIIC Proposes Change In Status; Chi Epsilon Resigns

Political Action Not In Charter

During the last TIIC meeting Chi Epsilon's representative announced that they will resign due to the political manuevers of TIIC. A formal written resignation is expected to be handed in at tomorrow's meeting. Chi Epsilon is the CE honor frater-

Guenther Wilhelm, president of Chi Epsilon, said that it is "contrary to the objectives and purposes of Chi Epsilon Fraternity to participate in any group of political nature or a pressure group." The Civil Engineering honor fraternity's constitution forbids any political affiliation as a group. Since TIIC is becoming a pressure and political group, Chi Epsilon will have to resign if politics continue to be part of the Technology Intersociety Interfraternity Council. This will not be done with a strong desire on the part of the honor society's members but rather as a necessary move to abide by the fraternity's constitution.

Commenting on this, HKN (EE honor society) representative Irving Kalet said he believes that political issues are well within the domain of TIIC and should be discussed. He says that, "Any decision arrived at by more than one person involves politics" and anything which involves the entire student body involves technology students. TIIC, being a student organization has the right to voice its opinion on any student issue.

Wilhelm suggested a separate political organization, aside from TIIC, which would make tech students more aware of political issues and Student Government.

Mike Rukin, president of the Tau Beta Pi engineering honor society, said his organization would endure any burden and undertake any task to enable TIIC to bring reforms in Student Government. Thus Tau Beta Pi will support all decisions, whether political or not, arrive at by TIIC.

-Mike Buczaczer

EE Grad Photos

Photographs of graduating EE seniors will be taken by HKN this term in H036 during the week of Dec. 4-8 from 1 p.m. to 5 p.m. each day. These photos will be placed on the EE office cards to help instructors in recalling individual students when responding to future reference requests. No appointments will be made, come at your convenBy SAMUEL EIFERMAN

At the November 16, meeting of the Technology Intersociety Interfraternity Council Mike Rukin of Tau Beta Pi brought new life to the Council in the form of motions calling TIIC to action. One of his motions calls for TIIC to become a North Campus Student Government with six elected representatives (one from each class and two at large) elected by the engineering students. The present organization of TIIC shall have

AIEE-IRE

Placement Office

The AIEE-IRE together with the Graduate Placement Office will present a panel discussion on Thursday, November 30, at 12:20 p.m. in S306 entitled "The Transition Between School and Industry." The panel will be composed of recent C.C.N.Y. graduates and Mr. Ernest Schnaebelle, Placement Office Director. All seniors and/or members of the AIEE-IRE are invited to attend.

CEs Discuss Zoning Regs.

By FRANK SCHUTZ

A rarely emphasized aspect of civil engineering is the relation of structures to people. While the Civil Engineer is generally concerned with making his structure work, his concern also is making the environment work. At the recent annual convention of the American Society of Civil Engineers, a seminar was held on City Planning.

The general theme of the discussion, which dealt primarily with zoning defined the purpose and reason for the existence of zoning which is to prevent the uncontrolled growth of adverse environmental conditions, both in the urban complex, and its adjacent satalite areas. Its function is to protect the public from noise, odors, crowding, congestion and pollution. Zoning, which has been used in the past exclusively as a negative control, to prevent things from getting worse than they are, is now being considered as a planning

tool, to guide future growth. Fifty years ago the City of New York enacted the first zoning laws, which influenced the zoning of most large communities in the United States. On Dec. 15 of this year a new completely revised code will take effect. Among the provisions of these new statutes are; residential controls which will set a room per lot size ratio, which

(Continued on Page 4)

only one representative each on the new TIIC. Another motion stated that "the Technology Intersociety Interfraternity Council drop the Intersociety Interfraternity to become the Technology Council" in order to reflect it's new status. He also made a motion to have the TIIC bulletin board improved so that it will look good enough to be the bulletin board of the new Technology Council. Another motion that TIIC meet every two weeks failed. Chi Epsilon resigned from TIIC at this meeting because it's constitution does not allow it to participate in politics. On top of all this TIIC passed a motion to write Tech News a letter condemning Tech News for their "thoughtless stand" on the new Student Government Constitution.

A committee was organized by TIIC to support students from the School of Technology who are running for office in the Student Government. The platform of these students increases the power of TIIC and therefore they say it increases the power of the Technology student. The platform itself is:

1. The appointment of an engineering Student-Faculty Fee Commission to allocate fees to the various engineering organizations. The Fee Commission will receive its money from the two dollar Student Activity Fee paid by all engineering students.

2. The right to grant charters to organizations on the Technology Campus. (This suggestion was made in the light of the difficulty encountered by AXE, the Chemical Engineering honor society, in getting their charter approved by the "inefficient, inconsistent, and unpredictable actions of the present Student Faculty Committee on Student Activities" as stated by Mr. Rukin.)

3. There will also be provisions for mimeographing and ditto services at the North Campus for Technology organizations to

4. There will be meeting rooms, offices, and lounges at the North Campus comparable to the luxury of those provided at the South Campus.

5. The new Technology Council will govern and coordinate the activities of the School of Technology and its organizations in a manner representative of on the spot rather than from a far government.

This committee is also circulating a petition in the School of Technology to ask the administration to set aside the Student Activities Fee paid by the Tech student which will be given to TIIC to disperse among the organizations and activities of the School of Technology.

TBPi To **Erect Bent** In Steinman

The Eta chapter of Tau Beta i, the national engineering honor society, is making arangements to have a model of ts emblem, the Bent, placed on he campus. The proposed site for the monument is the lobby of the new technology building, Steinman Hall.

The monument will stand our feet high. It will be cast in pronze at a local foundry in the Bronx from a pattern which will be borowed from the national office of the organization. The otal cost of the project, approxmately three hundred dollars, the come from the chapter's reasury. The pattern will arrive n New York sometime in Janury from the midwest, where it s presently being used by sevral chapters.

The first chapter to erect a Bent monument was Indiana Alha (Purdue University). The hapter then donated its pattern o the national organization so hat other members could also se it. About a dozen chapters ave already borrowed and used he pattern, including Pratt Intitute and New York Univers-

The purpose of erecting the ent monument on the campus to "publicize Tau Beta Pi and all attention to the high scholrship and worthy character hich mark outstanding profesonal engineers." The organizaon performs many services to ne school such as assisting to gistrar's office to catalog, and itoring lower classmen. To be ligible for admission to Tau eta Pi, an upper junior must e in the top eighth of his enneering class and a senior ust be in the top fifth of his igineering class.

Editorial Policy of TECH NEWS is determined by a majority vote of the Editorial Board

The Civil War

The Tech ostrich has finally lifted its head out of the hole in the ground, mainly because it's being kicked so hard in the backside. Fee allotments to tech organizations have been small; AIEE-IRE, which has over 300 members, received a fee allotment of only \$28. Some tech organizations have been denied use of campus facilities because they did not hand in their petitions on time; a first appeal was denied. The editorial policy of this publication has not brought con-

But now the Civil War is to be fought again. The North has threatened sucession! Although not intended as more than a call to arms, the secession idea is indicative of the kind of thinking now going on on North Campus. The time has come to take Student Government out of Southern hands and give it back to the North.

To this end, Tech students are now circulating petitions for SFCSA and most Student Council vacancies. In all probability they will run together on the same slate. Most are not very experienced in the affairs of Student Government, but this should not seriously hinder their election chances. Nearly half the representatives now serving on council are doing so for the first time. Their platform promises to be significantly different from those the campus has seen in recent terms.

Win or lose, the resurgance of interest in schoolwide affairs to the extent of actual participation is one of the most important occurences in tech student life in several years. We sincerely hope it marks the beginning of the end of a tech student who is immersed in his own narrow world and oblivious to anything not directly relevant to his future career, and the end of the rampant sectionalism now existing within City College.

Good luck boys.

S.G. Constitution

On the other side of this page you will find reprinted the proposed new Student Government constitution. This document is the product of many months of work by many people. There was a Feingold report, a Podell report, some suggestions from President Gallagher, and a Student Council proposed constitution presented by the Becker Committee which borrowed from all of the others to put an actual constitution into the hands of Student Government this term. Student Council then worked on it and finally amended it to the form it is now in.

The Student Government constitution was not just thrown together to pass for a charter; it is a carefully thought out statement that merits the careful attention of each and every student in the school. Read it thoughtfully. You will have to vote on it in the upcoming school-wide election. Your vote will decide what form of student government you will be represented by.

Dear Editor:

Many recent events which have occured concerning the school of technology have prompted me to write this letter. Student Government's discrimination against anything associated with the word "Technology" has been so appalling and so overlooked that I think it is necessary to reveal the present situation to all students.

At the beginning of each semester we all pay a \$14 registration fee, which, as is printed on the bursar's receipt, is to be al-. located as follows:

General Fee Athletic Fee \$2 \$2 Student Activities \$5 Student Center

In particular I object to paying items three and four. I personally am associated with several groups on campus among them being AIEE, IRE, and TECH NEWS. Because of my familiarity with these organizations, I will state several matters that have occurred with regard to these organizations, with the knowledge that similar situations exist with other tech groups.

This year, as in previous years, the fee allocations given to the AIEE, IRE, and TECH NEWS are wholly inadequate. A \$28 fee allocation to an organization such as the AIEE-IRE which has a yearly operating budget in excess of \$750 is in my opinion discriminatory. TECH NEWS has been forced to reduce its number of publications yearly because of its fee allocation from SG. Campus and Observation Post give views on the news from a different angle than TECH NEWS, and thus by giving Campus and OP a total fee allocation which is about four times that of TECH NEWS, SG is able to express their views much more frequently than the tech student. THIS IS DIS-CRIMINATION.

The \$5 fee which we pay for the Student Center is a farce. As far as I am concerned Finley Center is only an emergency exit for Downer Hall. It is impossible for any "tech group" to obtain an office in Finley. Reevaluation of room allocations and usage is slow and prejudicial. In my estimate the Technology Professional Societies have a total membership of about 600 or 700 and corespond ing to this a total office space in Finley of 0 sq. inches. THIS IS PREJUDICIAL. Surely, one large room could be set aside and partitioned for the use of Technology Professional Societies. The only tech organizations that have office space in Finley at present are TECH NEWS, Vector, and TIIC.

I intend to submit petitions for a referendum on the next election concerning the follow-

1. A committee, composed of two students from the School of Technology, two students from the Schools of Liberal Arts and Education, one faculty advisor from the School of Technology, and one faculty advisor from the School of Liberal Arts and Education, be instituted for the purpose of determining all fee allocations. Fee allocations are to be published by the second week of the term. A two week period for the purpose of appeal will be allowed after which all allocations become binding and valid.

2. Applications for office space in Finley Student Center shall (Continued on Page 4)

S.G. Constitution

Preamble

We, the students of the City College, Main Day desiring: t maintain academic freedom and student rights; to stimulate and improve democratic student government; to develop better educational standards and facilities; to improve student cultural, social and physical welfare; and to foster the recognition of the rights and responsibilities of students to the College and to the community. The pare do hereby establish this Constitution for the Student Government then; the of The City College, Main Day.

ARTICLE I

Section 1) The name of the instrument of student self-government shall be the STUDENT GOVERNMENT.

Section 2) The Student Government shall consist of an executive look furth branch, known as the EXECUTIVE; a legislative branch, known thing tho as the STUDENT COUNCIL; and an activities control board, iences that known as the STUDENT ACTIVITIES BOARD.

ARTICLE II

Section 1) The executive power of Student Government shall be light. The vested in a President, a Vice-President, a Treasurer, and a Secretary elected by the Student Body at large and three (3) ermine po Executive Vice-Presidents chosen by and from the Student of

Section 2) The powers of the Executive shall be:

A. To act as the executive committee of the Student Council.

B. To execute and enforce all regulations and mandates en-der and mo acted by the Student Council.

To review and accept all organizational charters of peti-enth centu tioning clubs and organizations.

To observe the activities of all clubs and organizations.

E. To suspend the rights and privileges of all student clubs se who fe and organizations which violate their charters and/or rules do with p and regulations established by Student Council.

 \mathbf{F} . To act in the name of Student Government in cases of to of com emergency.

ARTICLE III

Section 1) The Student Council shall be composed of:

A. The President, the Vice-President, the Treasurer, and the by the Secretary each of whom shall be elected for one semester en you go

Six representatives elected in the Fall semester for one you who year from the Freshman, Sophomore and Junior classes The Senior class shall elect six representatives for one ars compil

In the spring, the incoming Freshmen shall elect six (6) thess. Reg representatives. These representatives shall serve for one bashfulnes semester.

Section 2) The powers of Student Council shall be:

A. To review and pass upon acts of the Executive.

To institute rules and regulations governing the conducted of disa of extra-curricular organizations and to have jurisdiction something over all files submitted by student organizations in theat his requ process of organizing or rechartering.

To allocate the Student Activities Fee to clubs and organitamy is su zations and other student activities as it deems best to fall from the general welfare of the student body.

D. To examine the financial records of all organizations toy struggling

which it allocates funds.

To supervise all Student Government elections.

To award appropriate insignia or honors to students for arded by superior merit in extra-curricular activities, for character wells upon and for service to the College.

To discipline students or student organizations for con-sising befo duct contrary to the regulations established by Student notice, c

To establish the methods of selection of student members glance up to Student-Faculty committees.

To make recommendations to the President and Faculty and hour concerning the affairs of the College,

To establish such by-laws as may be consistent with these is Gilbert articles to guide the Council in the exercise of its responsitional adult behavior bilies. By-laws shall be enacted by a two-thirds vote of nted Che the members present and voting. Abstentions shall not pleasant t be considered as persons voting.

K. To establish such committees, standing and temporary, as much me it may deem necessary to carry out the above respondal after a

To review any decisions of the Student Activities Board an that i and, by a majority vote, to over-rule any of its actions.

To act on, discuss, and consider matters affecting students instance. in their role as students.

ARTICLE IV

Section 1) The supervision of club and organization activities shall aled "Tip be vested in a body herein known as the Student Activitieong of the

Section 2) The Student Activities Board shall be composed of ing, think members chosen by federations of clubs and organizations. The half so pr number and composition of these federations shall be determinobility; mined by the Student Council and these determinations shall soul and t be included in the by-laws of Student Government.

Section 3) There shall be a Chairman and a Vice-Chairman of the t. "So lo Student Activities Board chosen by an absolute majority of y, as it were a specific members.

Section 4) The term of office of the Chairman and Vice-Chairman and vice-Chairman and Vice-Chairman shall be one semester. They shall be elected and take office. There is at the next-to-last meeting of the semester previous to the stiring. The one in which they shall serve.

Section 5) The Chairman of the Student Activities Board shall "Robert report at every regular meeting of the Student Council on the Flynn de activities of the Board. At the conclusion of his term of office gest an e

he rights and e community. The parentheses have been filled, the eulogies have been Governmentaken; the words have been rewritten, the drawings have been roduced; and so the literator has been lain to rest. For me, the th of James Thurber has been a renaissance. Seeing the wide ulation of reprints of his work made me seek out again the f-government ed essays, stories and pictures by Thurber. After the Unicorn he Garden, the Seal on the Bedpost, et al, my only recourse was an executive look further into the realm of his fellow essayists for the farranch, known hing thoughts, the wide-open prose and the stimulating exontrol board, iences that are characteristic of the essay:

In the essay, the author rolls up his sleeves and leads the reader the hand. There are no innuendoes, no hidden meanings to find; author is sitting just across the room, he is giving it to you light. The reading is easy and enjoyable. The thoughts are proative, but not convincing; for it is not the essayist's function to and three (3) termine policy. He merely bares his soul so that the reader will the Studentie note of the author's words and reach a more tenable conclun. The reader usually comes away with many interesting points onder, some of which I would like to reproduce here.

The essay has been around for quite a long time. One of the mandates en-der and more engaging pieces is one "On the Art of Conversing" Michel Montaigne. It was written in the latter part of the sixnth century, but retains a good deal of bearing on the world today. Said Montaigne regarding the people he cares to speak h: "I seek the society of those who drub me rather than of student clubsuse who fear me. It is a flat and harmful satisfaction to have s and/or rules do with people who admire and give way to you. I feel much uder of the victory I gained over myself when, in the very t in cases of at of combat, I make myself give way to the force of my adsary's argument, than I feel gratified by the victory I gain er him through his own weakness." In his theory of argumenta-, he notes: "What greater triumph can you expect than to teach ir enemy that he is not your match? When you gain the advanurer, and the e by the substance of your argument, it is the truth that wins; one semester. Yen you gain the advantage by your method of conducting it; ester for one you who win."

A man long on time and talent was Samuel Johnson who spent tives for one are compiling his Dictionary. In addition he wrote well over two ndred essays, one of the most famous of which concerns bashelect six (6) thess. Regarding what Johnson considered the primary cause serve for one bashfulness, he said: "No cause more frequently produces bashness than too high an opinion of our own importance. He that agines an assembly filled with his merit, panting with expectaon, and hushed with attention, easily terrifies himself with the the conducted of disappointing them, and strains his imagination in pursuit e jurisdiction something that may vindicate the veracity of fame, and show ations in the at his requtation was not gained by chance. He considers that at he shall say or do will never be forgotten; that renown or s and organitumy is suspended upon every syllable, and that nothing ought eems best to fall from him which will not bear the test of time. Under such icitude, who can wonder that the mind is overwhelmed, and, sanizations toy struggling with attempts above her strength, quickly sinks into guishment and despondency?"

To remedy this situation, Johnson offers: ". . . no man is much students for arded by the rest of the world. He that considers how little he for character頰ells upon the condition of others, will learn how little the attenn of others is attracted by himself. While we see multitudes ions for conassing before us, of whom, perhaps, not one appears to deserve l by Student notice, or excite our sympathy, we should remember, that we ewise are lost in the same throng; that the eye which happens lent members glance upon us is turned in a moment on his that follows us; and at the utmost which we can reasonably hope or fear is, to fill a and Faculty ant hour with prattle, and be forgotten."

The man called "the Doctor Johnson of the twentieth century" nt with these s Gilbert K. Chesterton, who took apart one of the great foibles f its responsi. adult behavior, that of running after a wind-blown hat. Comhirds vote offented Chesterton ". . . there is a current impression that it is ons shall noticeleasant to have to run after one's hat. Fhy should it be unasant to the well-ordered and pious mind? . . . The same people temporary, as in much more eagerly after an uninteresting leather ball than they bove respon all after a nice silk hat. There is an idea that it is humiliating to n after one's hat, and when people say it is humiliating they ivities Boardman that it is comic. It certainly is comic; but man is a very Onic cerature, and most of the things he does are comic — eating, cting student instance. And the most comic things of all are exactly, the things it are most worth doing — such as making love. A man running er a hat is not half so ridiculous as a man running after a wife." Of great bearing on our troubled world of today, is a piece ctivities shalliled "Tipperary" by George Santayana, referring to the war

ent Activitiesong of the same name. On whether to surrender or fight to the ath, the author declares: "If you think happiness worth encomposed owing, think it worth defending. Nothing you can lose by dying nizations. The half so precious as the readiness to die, which is man's charter hall be determ nobility; life would not be worth having without the freedom inations shall soul and the friendship with nature which that readiness bringgs." ntayana believes that we have not seen the end of war by long airman of the t. "So long as the world goes round we shall see Tipperary e majority of y, as it were, out of the window of our troop-train. Your heart d mine may remain there, but it's a long, long way that the

There is much more worth, reading and more easily done than evious to the ting. There is H. L. Mencken refering to the South as "almost sterile, artistically, intellectually, culturally, as the Sahara des-Board shall." Robert Benchley explaining the Indian Rope Trick, and Edward ouncil on the Flynn defending bossism and machine politics. I would heartly term of office gest an excursion into the world of the essay as a well-worth ristmas present for yourself.

SAE Will Hear NASA Officer

This Thursday, the Society of Automotive Engineers will feature the National Aeronautics and Space Administration program, "Career Goals in Aero Technology," The Speaker will be Mr. Robert Tiemann, Personnel Projects and Recruitment Officer for the NASA. The meeting will be held to room S126 Shephard Hall, and will begin promptly at 12:30 p.m.

His talk will see the new role of the scientist and engineers in aerospace technology. It will include the new areas of work as well as the new concepts of operation, and the relation of the scientist and engineer to this work from paper and pencil to poised spacecraft. With approximately 2000 new jobs with the NASA opening up in the future, this meeting should be of great interest to senior engineering and science students, and also to those lower classmen who want to know about a segment of the engineering field that they may enter.

For the early birds, there will be given away copies of Papers presented at SAE technical meetings all over the country. Topics of these papers cover aeronautics, ,automobiles, spacecraft, and ground and flight vehicles.

ELECTIONS REMINDER

Petitions for the Student Government Elections of Fall 1961 will be collected on Nov. 27-29 only in 151 Finley between 11-3. This is a corection of the previously stated time of 10-3.

The results of the Election will be announced at the Student Government Dance, Dec. 15, sponsored by Gamma Sigma and Alpha Phi Omega.

Constitution.

(Continued, from Page 2)

he shall submit a final report and recommendations to Student Council.

Section 6) The Student Activities Board shall be the planning board for the Finley Student Center. Clubs and organizations wishing to hold functions requiring campus facilities, publicity or rooms must submit a request to the Board as required in the by-laws.

Section 7) The Student Activities Board shall institute, organize, and administer social and cultural events.

Section 8) The Student Activities Board shall keep a calendar of all activities at the College and shall resolve disputes between clubs and organizations concerning dates and publicity.

Section 9) There shall be four (4) standing committees of the Student Activities Board and such ad hoc committees as the Student Council or the Student Activities Board deems necessary for the fulfilment of its functions.

The standing committees of the Student Activities Board shall be:

A. Social Affairs Committees

B. Cultural Committee

C. Publicity and Facilities Committee

D. Service Committee

The standing committees shall be composed of members of the Student Activities Board and/or other students elected by the Board.

Section 10) This article shall not be construed so as to prevent individual clubs or organizations from instituting programs of their own, subject to the provisions of Section 8 of this Article. ARTICLE V

Section 1) Members of Student Council and major officers may be removed from office upon petition to Student Council of 25% of the members of Council or 10% of the student body, followed by an open hearing on the charges to be held not earlier than two weeks or later than one month from the date of the filing of the petition. The vote of the Council must be twothirds of the total membership of said Council.

Section 2) Student Council must provide for a special school-wide election by the fourth week of each term, to fill vacancies for the remainder of the term of office,, the procedures to be determinded in the by-laws.

Section 3 All additional vacancies shall be filled at the next regular election for the remainder of the term of office of the position vacated.

ARTICLE VI

Section 1) This Constitution may be amended by either:

A. A referendum placed on the ballot by a majority vote of the Student Council and receiving a majority of the votes cast in the election.

A referendum placed on the ballot upon petition of 10% of the registered Main Day Student Body and receiving a majority of the votes cast in the election.

Section 2) This document shall become the Constitution of the Student Government when it shall have been approved by a majority of the Student Body voting upon it, and shall have been approved by the General Faculty.

Section 3) Any by-laws inconsistent with any provision of this Constitution shall be null and void.

Zoning...

(Continued from Page 1) will vary district to district, to control population density and balance people vs. facilities; an open space ratio, which balances usable open space to floor area, and provides a bonus in allowable area for plaza space; provisions for adequate spacing of buildings in large developments; performance standards which group compatible functions and protect them from other noxious ones, flexible public parking requirements which vary with the area and the type of traffic generator; plus additional provisions for coping with problems unknown, when the first laws were drafted fifty years ago.

However zoning is not without its defects. The planner still finds it rigid and inadequate, while the lawyer finds it too flexible and inconsistent, and the courts would rather not get involved in it, but the public praises it as a protector from all evils. Zoning has been called effective, if its purpose is to provide the public with what it thinks it wants. Too often it has been used for self interest; commercial groups, once estab-Tished, have used it as a device to keep competitors out, and social, racial or economic groups using such means as large lot zoning have kept other groups out. Where zoning is fragmented into small political subdivisions, there is no regional consistancy, each burg is law unto itself and each small misuse and abuse goes unnoticed. It has been suggested that if zoning is to be used to guide the future growth of the urban complex, it must be conceived on an obpective basis, and administered on a regional one.

Letter . . .

(Continued from Page 2) be submitted to a committee constituted as above for the purpose of allocation of office space. This committee shall allocate office space without re-

gards as to present occupancy. I sincerely hope that my fellow students will join me in signing the above petitions and when the time comes to vote they will get out and support the above referendums. Thank you for printing my letter.

25 Are Elected To TBPi Honor Society

The Eta of New York Chapter, Tau Beta Pi, has announced election of the following men from the School of Technology; in keeping with its purpose: "To mark in a fitting manner, those who have conferred honor upon their alma mater by outstanding scholarship and exemplary character as undergraduates. . . ."

UPPER SENIORS

Benjamin Altman Herbert Aldrich Donald Arnstien Fred Brodbeck Patrick Broderick Albred Baginski David Chase Franklin Cohen Gerald Kaplan

Charles Tenorio Chris Tsistinas

LOWER SENIORS Richard Brose Fulvio Corti

Philip Heyman Werner Kurzbuch. Michael MoMrganstern Robert Pavlica

Joel Shafran William Stern Kenneth Sussman

Leonard Weinberg **UPPER JUNIORS**

Alan Gardner Sheldon Katz Dennis Kirson

Frank Ventriglio Election to Tau Beta Pi requires: 1) Scholastic Standing (Top 1/5th of class for Seniors,

top 1/8th of class for Upper Juniors), 2) Breadth of interest outside of engineering, 3) Adaptability, 4) Integrity, and 5) Unselfish activity.

These twenty-five men h been adjudged worthy of me bership and will be officially stalled at the "Induction D ner" on December 9th.

COMPUTERS CAN NOW TRADE DATA COAST TO COAST OVER TELEPHONE LINES

IBM has developed systems of computer-to-computer communication, which foretell the greatest advances in data processing since the introduction of the stored-program computer. These Tele-Processing* systems greatly extend the useful range of data processing—putting their power at the disposal of businessmen and scientists located miles away.

Now it is possible to transmit data between two computer installations at speeds up to 62,500 characters per second via broad-band communications channels. Any number of computing systems can be linked in this way in order to exchange information or feed it to a data processing center. As a result, although they may be separated by a continent,

computers can bring their capacities to bear on a single massive problem or operation.

There can be an exciting future for the graduate at IBM. The choice of jobs is wide. Advancement potential is excellent. All qualified applicants will receive consideration for employment without regard to race, creed, color or national origin. Whatever your talents and skills, there may be just the job you've always looked forward to after college. Why not find out by talking with the IBM representative when he next visits your campus? Or write, outlining your background and interests, to: Manager of Technical Employment, IBM Corporation, Dept. 896, 590 Madison Avenue, N. Y. 22, N. Y.
