CCNY Sends Old Kentucky Home, 89-50; Meet Duquesne on Thursday

By Haak Wexler and Herman Cohen

The sun isn’t shining bright in the Old Kentucky Home this morning. City College, the dark horse of the NIT should be given a salvia test after last night’s amazing 89-50 route of Adolph Rupp’s highly touted Kentucky Wildcats.

For 40 minutes the Beavers, Warmer, Danwood and Roth, taking turns at the throttle. They sent the Wildcats into the breach.

The Beavers now move into the final round of the Tournament facing Duquesne tomorrow eve-

They won the opener of the NIT Garden twin bill, forming a tepid LaSalle five, 49-47.

There’s no doubt but that Nat Holman and Company showed the Wildcats a real southern in fey could be run, needing "Allergious" and "Charges".

Spivey a Dud

The highly touted Bill Spivey, southern Empress of Basketball, was held to a single foul shot at the first half, while committing four personal fouls.

He was used sparingly after that, and it greatly to his credit that he managed to score 10 before fouling out in the second half, with both seconds left in the game.

Nat Holman’s initial bit of strategy proved successful, as Le-roy used a "man to man, one on one" for the opening tap. Then, with Ed Roman coming in immediate-

the rebounder broke the first half wide open.

Catching the Wildcats cold, City College’s 35-20, the NIT Garden twin bill, forming a tepid LaSalle five, 49-47.

The Beavers kept pouring it on to the five-minute mark, as Nat Holman’s initial bit of strategy proved successful, as Le-roy used a "man to man, one on one" for the opening tap. Then, with Ed Roman coming in immediate-

the rebounder broke the first half wide open.

Dig, Dig You Beavers

You AIN'T SEEN NOTHING YET! Baron Rupp is going to wall about how his pet Wildcats were "off," and how our New York referee jibed him out of the NIT, but he's whisky, I'm your friend. A. Wrigley, also, his Kentucky team, can only propose that the load

**Camels for Mildness!**

Yes, Camels are SO MILD that in a come-to-concert test of hundreds of men and women who smoked Camels—and only Camels—for 30 consecutive days, noted throat specialists, making weekly examinations, reported:

**DOES ONE SMOKER CARE OF THROAT INJURIES DUE TO SMOKING CAMELS?**

**Fisch Stories**

**The Law of Avocados**

Ordinarily we do not publish letters written to this department because we do not care to perpetuate insults. However, we cannot ignore a call for help from a colleague in distress.

_Dated... Slow Boat to China_ February 23, 1950

*Dear Fisch Stories,*

I am in deep trouble. I handed in a theme for my Psychology course. My prof called me up and showed me another report which duplicated mine word for word. She could not be convinced that it was sheer coincidence. It was impossible, she said.

(Signed) **Disturbed**

*Answer... Disturbed,** you have taken a step in the right direction last by coming to me. Having flunked Elementary Algebra twice and having passed none where Calculus is taught I am somewhat of an expert on the law of probability.

Do you know that an Englishman has worked out Pi to 600 places using this value for Pi, the area of the earth swept out by the earth in its trip around the sun can be estimated with an error of less than one thousandth of a square inch.

Take another problem. How long would it take a jungle full of monkeys banging away happily at typewriters to duplicate all the books in the British Museum? Believe it or not this has been worked out by us mathematicians. The answer is six zillion, zillion years.

Now to your problem

*You Never Know With Psych Students*

What chance is there that two exact themes could be handed in by Psychology students, beginning with the time our ancestors climbed trees and threw coconuts down, up to the present time?

This is a simple problem compared to the last one. The answer is one chance in a zillion, so your prof is wrong when she says it's impossible.

Not very convincing you say. Probs are skeptical. (Why up in Harvard, the science professors before performing experiments, bounce rubber balls to see if the law of gravity is still working.) However, I will not leave you in a lurch.

I went to Bryant Park and engaged the services of five Ph.D.'s out of work to help me gather statistics on exam results in our colleges. They came up with some interesting information. I shall only quote what is pertinent.

**Impossible Never Impossible**

In the last week two thousand exams were given in certain colleges which were selected for sampling. My agents broke down the statistics and found the following constant: in a class of twenty-five, with an exam of one hundred short form questions, there will be seven papers with the same eight answers.

This is astounding. Mathematically speaking, and using the law of averages, the probability of this happening is very, very remote. Yet it does happen. Professors from time to time have been puzzled by this common phenomenon.

Aided by my collaborators, I have solved the problem. But first I must give you an analogy. Scientists know that the ordinary laws of physics are not universal, they cannot be applied to occurrences within the atom, and wherever particles approach the velocity of light... And so, the answer to your problem, like all epoch-making discoveries, is simple: THE LAW OF AVERAGES DOES NOT WORK IN COLLEGES! From this it follows that it is readily possible for two themes to be alike within a relatively short period. Besides, college students cannot be compared with monkeys working in a jungle.

They don't work anywhere.

When the themes are handed back, tens up a cooe as those who should destroy his copy, your or your friend. Else it does not take much of a mathematician to figure out how long it would be before an entire class hands in the same report.

**Pharmacy Offers You A Future**

The School of Science and the development of drugs have opened new avenues of people. After completing your course, you will be prepared for a valuable future in Dispensing Pharmacy and a honorable future in Dispensing Pharmacy. An opportunity to receive a well-rounded education of a limited number of men and women in Pharmacy and is offered. Since the opportunity to receive a well-rounded education.

Inquiries should be made now. For the details and admission requirements, apply to B. Brown, School of Pharmacy.
